

PROFESSIONAL SUMMARY

ML Infrastructure Lead with 8 years of experience, transitioning from SRE to ML platform engineering. Deep AWS expertise, production reliability background, and hands-on experience integrating Amazon Bedrock into consumer-facing features at Spotify's New York office.

EXPERIENCE

ML Infrastructure Lead

Spotify | Long Island City, NY | 2020 – Present

- Designs and operates AWS ML platform serving 10+ production models across recommendation, personalization, and podcast audio analysis.
- Integrated Amazon Bedrock for podcast summarization and content discovery; owns prompt versioning and deployment pipelines.
- Built CI/CD pipelines for model deployment, A/B testing rollouts, and canary releases; maintains 99.97% uptime SLO.
- Implements CloudWatch and Datadog observability; reduced ML infrastructure spend 25% through cost-per-request optimization.
- Leads incident response for AI system outages; authored operational playbooks reducing MTTR by 40%.

Senior Site Reliability Engineer

Spotify | New York, NY | 2015 – 2020

- Production reliability engineering for Spotify's core streaming infrastructure on AWS (EKS, EC2, RDS, S3).
 - Built self-healing infrastructure and automated runbooks; handled 100M+ daily active users.
-

EDUCATION

B.S. Computer Science, Stony Brook University, 2015

SKILLS

AWS (Bedrock, EKS, SageMaker, CloudWatch, EC2, Lambda, S3), Python, Go, Terraform, Kubernetes, Datadog, CI/CD, SLO design, MLflow, reliability engineering, incident response, infrastructure-as-code
